STREET'S TEXT OF THE *SECRET HISTORY OF THE MONGOLS*

Version 24 of 10 October 2013

Copyright John C. Street 1985-2013

1010 Moⁿqol-un niuca tobcaan¹

1011 (§1) C^rgis qahan-u hujaur.

1012 Deere teⁿgeri-ece jayaa-tu töre=gsen börte cino: a=juu.

1013 Gergey in-u qoay maral a=jaiy. Teⁿgis ketül=jü ire=BA.

1014 Onan müren-ü teriün-e Burqan² qaldun-a nuntuqla=ju

1015 töre=gsen Bataciqan a=juu.

1018 (§2) Bataciqan-u köün Tamaca; Tamaca-yin köün Qoricar_ mergen.

1019 Qoricar_ mergen-ü köün Aujam_ boroul. Aujam_ boroul-un köün

1020 Sali_ qacau; Sali_ qacau-yin köün Yeke_ nidün; Yeke_ nidün-ü köün Sem_ soci;

1021 Sem_ soci-yin köün Qarcu.

1025 (§3) Qarcu-yin köün Borjigiday_ mergen. Moⁿqoljin_ qoa gergey-tü a=juu.

1026 Borjigiday_ mergen-ü köün Toroqoljin_ bayan; Boroqcin_ qoa gergey-tü

1: YCPS nyuca emended by all editors to niuca (i.e. n<yu>[iu]ca), and tocaan to tobcaan (i.e. to[b]caan). This clumsy-looking means of showing emendations (and interpretations) through bracketing is intended to make possible computer-searches not only for the original and the altered forms, but also for particular segments which it is suggested be dropped or added.

For compressed writings such as niuca for nⁱuca (i.e. my nyuca for niuca) see deR4.615 and Most99.257-58 (who calls this "l'omission fäutive de l'hiatus"). Related is the use of h or w "to 'bridge' the hiatus created by the disappearance of the intervocalic velar stops ɣ/g, hence qahan = qa'an...mawun = ma'u [etc.]" (deR4.222-23). See also Most99.258. references there.

In discussing SH emendations of the Chinese text (= YCPS) below, both the original and the suggested new form are normally presented in my own transcription systems (except, of course, in direct quotation marked by "..."). Thus, for example, the emendation of YCPS abua in line 8478 to abuad (i.e. abua[d]) by Haenisch (H62txt.69). Haenisch actually emended his "abu'a" to "abu'a[t]". Similarly, Haenisch's emendation of "Tünggeli" in 1202 to "Tünggelik" (H62.106 and 4) is referred to as a change of Tüngeli to Tüngelig (i.e. Tüngeli[g]).

2: Here, and usually below, the YCPS actually writes not Burqan (as 2474, Z033, for example) but Burhan; i.e. the diacritic character changing h to q is omitted. Such omission in this word is not noted in the present text.

7: C has odd writings for töreülbi here and in 1104, 1126, 1244; in 1104 and 1126 both PP and C actually show the l placed after the bi! In 1071 the bi is to the left of l.

8: YCPS boluBA interpreted as bolBA (i.e. bol<u>BA), here and below (in lines 1171, 1240, 1246, 1248, 1251, 1257(bis), 1253(bis), 1265, 1275, 1276, 1279, 1281, 1284, 1294, 1296, 1297, 1310, 2022.) We find the bolBA form itself written five times in lines 1074-1495, and regularly thereafter. Chinese sources of the 13th-14th centuries often used the Chinese syllable lu (written with various characters) to transcribe syllable-final -l in foreign names and terms. Such use of lu for syllable-final l is not uncommon in other SH forms as well, as noted below passim.

9: The q (present in PP) is missing from C.

10: YCPS qabirqar emended (by Pelliot 6; cf. T'oung Pao 37.102, note 1 [1944]) to qabirqas (i.e. qabirqa<r>[s]).

11: Ligeti here writes two words šrolqa da, rather than šrolqa-da (as Pelliot). Cf. deR4.256.

12: The g (present in PP) is missing from C.

13: C öjü, PP ögjü; emended (by H62dict.2, 105) to ögcü (i.e. ög<j>[c]ü).

14: YCPS aciraju emended (H62txt.2, 105, Pelliot 6) to abciraju (i.e. a[b]ciraju).

1103 (§17) Teyin a=tala Dobun_ mergen ügey bo=BA; Dobun_ mergen-i ügey

15: YCPS ügeyüy emended to ügeüy (i.e. üge<y>üy), here and throughout the text (but see note at line 6095). It was apparently Ligeti who first suggested this now generally accepted interpretation. (But note note to 6095 below.)

16: The l (present in PP) is missing from C.

17: For this word, plural of an obsolete müsün 'rod, [arrow-]shaft', see deR4.262. The singular (transcribed mösun by Vietze92.4 line 168, etc.) occurs in the parallel passage in Altan Tobchi §6a.

18: YCPS bayiunqun emended by Haenisch and Pelliot to bayiulqun (i.e. bayiu[l]qun); the small character changing a syllable closed by n to one with l was simply omitted..

19: The q (present in PP) is missing from C.

20: The l (present in PP) is missing from C.

21: Note the referential object (Street13.12-15): 'saying of me "She has..."'.
 22: Five of the primary sources for the present SH text attempt to distinguish poetry from prose. Kozin and Ligeti do so in their romanized Mongolian texts, and Pelliot uses boldface type to show what he took to
